

John Gahagan

john.gahagan3@gmail.com | +1-270-223-5301 | github.com/SaviorFs | www.johngahagan.dev

Education

Western Kentucky University

2020 – 2025

Bachelor of Science in Computer Science

Relevant Coursework: Operating Systems, Computer Organization and Architecture, Data Structures, Computer Networks, Software Engineering, and Technical Writing

Experience

Outlier AI – Software Engineer Reviewer

Remote | June 2024 – Present

- Reviewed AI-generated Python and Java solutions for correctness, structure, and efficiency.
- Wrote structured evaluations of algorithmic outputs to improve educational feedback systems.
- Validated edge cases and functionality through practical testing techniques.

Affordable Electric LLC – Electrical Technician Helper

Franklin, KY | July 2018 – June 2024

- Assisted with diagnostics and installations of electrical systems and components.
- Gained hands-on experience with wiring, schematics, and circuit-level problem solving.
- Collaborated with senior technicians to verify system performance and ensure safety compliance.

Projects

Smart Temperature Monitor (Embedded Systems Project)

GitHub

- Built a real-time temperature monitor using Arduino Uno R4 WiFi and DHT11 sensor.
- Developed a WebSocket dashboard with live updates and LED-based threshold alerts.
- Created testing documentation covering unit, integration, and system behavior.

Network Intrusion Detection System (Java Project)

GitHub

- Built a TCP/UDP-based Java application to detect network threats and trigger alerts.
- Used pattern recognition for rule-based detection and logged activity to Firebase.
- Authored test documentation verifying functionality and performance across threat scenarios.

Quiz Website

GitHub

- Developed a quiz platform with React and Firebase supporting real-time scoring and authentication.
- Designed input validation, session control, and result tracking.
- Wrote testing documentation for frontend feature validation and usage consistency.

Skills

Programming: Python, Java, C++, JavaScript

Embedded Systems: Arduino Uno R4, DHT11, circuit testing, microcontroller integration

Testing: Manual testing, test case writing, result documentation, bug reporting

Tools & DevOps: Git, Docker, GitHub Actions, REST APIs

Documentation: Test plans, QA notes, project validation logs

Operating Systems: Windows, Linux, Unix

Certifications

AWS Certified Cloud Practitioner (2024 – 2027)
